

SEMAR AS – BASE OPERATIONS FOR THE HYWIND TAMPEN

SEMAR AS' personnel have during the last half year worked at Wergeland Base in Gulen Industrihamn (<https://wergeland.com/prosjekt/239-2>) with planning, preparations and execution of all activities related to the offshore installation campaigns for Equinor's Hywind Tampen wind turbines to be installed this summer. All the logistics and organizing of the mooring equipment and elements such as; suction anchors, mooring chains, mooring wires and connection elements has been effectively managed. Lately our personnel have assisted during the suction anchor and mooring chain installation operation, with planning and preparing the equipment ready for loading onboard the installation vessel.
