

## HYWIND TAMPEN; INSTALLATION OF SUCTION ANCHORS

SEMAR AS, has played a key role together with Dof Subsea during planning and execution of the suction anchor installation for Equinor's Hywind Tampen wind turbines. Lately the last out of **19 suction anchors** were successfully installed utilizing the vessel Skandi Skansen. Semar engineering team is excited to see that our seafastening system worked efficiently during every load-out.

This design is based on a *non-welding* concept utilizing bolted connections during loading and unloading offshore.
