

HYWIND TAMPEN - TOW AND HOOK-UP OPERATION

SEMAR AS, has played a key role together with Dof Subsea during planning and execution of the tow and hook-up of Equinor's Hywind Tampen wind turbines.

Semar personnel have lately been onboard Skandi Iceman, participating as Offshore Manager, Tow Master and Lead Engineers during installation of the first three wind turbines.

We are delighted to see that our planning and engineering work has shown efficient and safe execution of the tow and hook-up operation.
